PATH Study Wave 6 Annotated Instrument - Explanatory Notes

BOX ID: R06_AMD07

(1) Structure of Question Boxes. Each question in the annotated instrument is presented in a box. Within the box, the top row usually indicates the name of the variable(s) in which data collected by that question are stored. However, for questions with a "choose all that apply" structure, the top row states "SEE BELOW:" and the variable names are displayed next to the corresponding response options. All variable names are displayed in bolded red font. The second row includes the question text, including any instructions for the respondent (for example, "Choose all that apply"). The next several rows display the response options. The last rows specify which respondents were asked the question, followed in many instances by special instructions used in programming. The rows that specify which respondents were asked the question are split into two parts: The first part (the "ASK Description") provides a general description of which respondents were asked; the second part (the "ASK Specification") identifies which respondents were asked as a logic statement using specific variables.

(2) Non-Question Boxes. Some boxes in the instrument do not include questions. These boxes include introductory text, display instructions, or more complex programming instructions, such as those used to create derived variables.

(3) Question Routing. The instrument was designed with the assumption that all respondents to a question would be asked the next question, unless there are specific instructions routing a subgroup of respondents to a different question. The phrase "GO TO" precedes such routing instructions. Complex routing instructions are split into two parts: The first part (the "GO TO Description") provides a general description of the routing instructions; the second part (the "GO TO Specification") reiterates the instructions as a set of logic statements, using specific variables. Non-response values ("DON'T KNOW" and "REFUSED") are treated the same as response values for routing; if they are not mentioned in specific routing instructions, then the routing follows other criteria. Many routing instructions consist of multiple statements. The first statement describes a set of conditions and indicates the next question to be asked if those conditions are met. ("IF ____, GO TO ____.") Subsequent statements use the word "else" to indicate that the conditions given in previous statements have not been met. ("ELSE, IF ____, GO TO ____.") This means that the first statement fulfilled by the respondent always indicates the next question asked.

(4) Randomized Question Order. Some series of questions were presented to respondents in a randomized order. In such instances, a non-question box precedes the series and specifies which questions are part of the randomized series. Routing within these series indicates which questions were asked of different respondents and reflects the static order of the questions in this document. It does not reflect the actual order in which the questions were displayed for respondents.

(5) Iterative Loops. There are several questions, series of questions, and entire sections that are specified as being asked in a loop. In such instances, questions were iteratively asked of the respondent to collect similar information on two or more topics. For example, the questions about cigars are asked iteratively regarding traditional cigars, cigarillos, and filtered cigars. These items are specified a single time, with programming instructions identifying the beginning and ending of the loop, how it is to be changed for each iteration, and the order in which each iteration should be presented. Looped items utilize iteration indicators to provide precise ASK Specifications and GO TO Specifications for each iteration of the item. The responses for each iteration are captured in different variables, which have different suffixes to indicate which iteration each variable applies to. For example, the variables for traditional cigars end in TC, the variables for cigarillos end in CG, and the variables for filtered cigars end in FC. (Please refer to the PATH Study User Guide for detailed information on variable nomenclature.) ASK Specifications and GO TO Specifications address each iteration separately, with the particular variable identified at the start of the specification. (For example, "FOR R06_AG1005TC:" precedes the ASK specification that applies to the traditional cigar iteration of R06_AG1005; "IF LOOP = GTRAD" precedes the GO TO Specifications that apply to the traditional cigar iteration of routing instructions.) However, the ASK Descriptions and GO TO Descriptions do not address the iterations

separately. Instead, the overall description is given a single time and the iterated products are combined by slashes. (For example, "respondents who have ever smoked traditional cigars/cigarillos/filtered cigars" indicates that one iteration of the question applies to respondents who have ever smoked traditional cigars, another applies to those who have ever smoked cigarillos, and another to those who have ever smoked filtered cigars.) When GO TO Descriptions and response-level GO TO statements indicate routing to a variable within a loop, the root variable is referenced a single time and the iteration indicator suffixes are combined in brackets. (For example, "go to R06_AG1005[TC/CG/FC].") This is done to simplify the presentation. Unless explicitly stated otherwise, variables for one iteration have no impact on a different iteration. For example, if a question about cigars refers to a variable that ends in [TC/CG/FC], only the TC variable applies to the traditional cigar iteration, only the CG variable applies to the cigarillo iteration, and only the FC variable applies to the filtered cigar iteration.

(6) Variables For Multiple Components. Some questions contain separate variables for multiple components. Examples of such items include "choose all that apply" questions, where there is a separate variable for each response category; questions that ask about duration, where data are recorded in separate variables as number and unit (days, months, years) combinations (number variables are indicated by the suffix `_NN` and unit variables are indicated by `_UN`); and questions that ask for a price, where data are recorded in separate variables as dollar (`_D`) and cent (`_C`) combinations. (Variables with the suffix `_D`, `_C` or `_NN` are open-field variables that allow respondents to enter any numeric value. As such, no discrete values are indicated for these variables. However, variables with the suffix `_UN` have values corresponding to set options from which the respondent must choose. Because `_NN/_UN` questions combine these two variable types, item-level notes are utilized to clarify that the discrete values presented in the instrument refer only to the `_UN` variable.) Each component variable in such items is differentiated using an appropriate suffix. (Please refer to the PATH Study User Guide for detailed information on variable nomenclature.) However, when variables with multiple components are referenced in routing instructions that precede the question, the component suffix is omitted. This is done to simplify the presentation, since before the question is asked, the respondent's answer is not known. Unless explicitly stated otherwise, the reference to the root variable name (without the component suffix) in the logic means that the logic applies to the entire item, not just to a specific component variable. In routing instructions that come after the question, the specific variable with the component suffix is included, so that the routing instructions are clear and specific.

(7) Logic Checks. Some questions include a soft range check for responses. This means that respondents were not prevented from entering responses that were outside of the range. However, if a respondent entered a response that was out of range, they received a prompt noting their answer. They were asked to change their answer if it was incorrect or confirm their answer by proceeding to the next question. These logic checks are presented in the annotated instrument as probe questions, immediately following the question they check. Respondents are routed to the logic check and a program note specifies the conditions that trigger the prompt to be shown. If the respondent did not meet the trigger conditions, they proceeded to the next question without being shown the prompt. Logic checks are identified by the suffix `_LC1` (or `_LC2`, etc.) added to the root variable name of the question they check. Although similar to actual questions, logic checks do not capture data. Logic checks are presented with ASK specifications, but without ASK descriptions to help distinguish them from actual questions.

(8) Section routing. Respondents are assumed to be routed through every section in the instrument in turn, unless otherwise noted. For the sections that ask questions about specific tobacco products (cigarettes, ENPs, cigars, pipe, hookah, snus, and smokeless tobacco), respondents are only routed to the section if they are ever users of the product, then to the Polyuse section. All respondents are routed to the Packaging and Health Warnings section. This routing is not explicitly defined in each section, but is driven by Box R06_AXR01, which specifies:

(a) For each product the respondent has ever used, route through product sections as appropriate. If respondent has ever smoked cigarettes, go to the Cigarette Section, then to sections (in order) for the other products they use (if any). Then go to the Polyuse Section. Complete remaining sections in order.

PATH Study Wave 6 Adult Public Use File (PUF) Annotated Instrument

(b) For respondents that have never used any tobacco products, go to the Packaging and Health Warnings Section. Complete remaining sections in order.

In some cases, a respondent is skipped from the middle of one section to the next section on the route that is applicable to them. This is noted by stating "GO TO THE NEXT SECTION." For simplicity, the specific logic for routing from one section to another is not described in these cases. Rather, it is assumed that respondents are routed through the specific tobacco product sections for every tobacco product they have ever used, and that all respondents are routed to the Packaging and Health Warnings section. After the Packaging and Health Warnings section, all remaining sections are completed in order.

(9) Never Users. The instrument refers to a respondent not reporting use of a product as having never used the product. As such, never usage includes respondents reporting that they have never used a product, or that they don't know whether they have ever used the product, or refusing to answer whether they have ever used the product. This design reflects programming and data collection necessities, rather than an analytic definition.

(10) Images. All generic images used to display examples during interview administration are included in an appendix. Images used to display tobacco brands, products, or advertisements are not included in this instrument.

(11) New Product Placeholder section. In the Wave 6 Adult data collection instrument, a placeholder section was included in the questionnaire to allow the possibility of adding new tobacco products to the survey during the data collection period. No product warranted activation of the section during data collection, so there are no data or variables associated with the section. Given that, the "New Product - Placeholder" section has been excluded from the Wave 6 Adult annotated instrument.

(12) References to Preload Data. As Westat prepares continuing respondent cases for data collection, data from prior waves are preloaded into the instruments for the current wave for longitudinal reference. For example, in the Wave 6 Adult instrument, identification of adults who have ever smoked a cigarette is based on the tobacco users groups and item responses from Waves 1 - 5 as well as responses to the Wave 6 instrument. Variables for this preloaded data are indicated by the prefix "R05_", signifying the most recent data at the close of Wave 5, the last primary wave. (Preload data for Wave 6 included responses from Wave 5.5 and PATH Adult Telephone Survey for respondents that participated in each respective special collection.) When referencing data from previous waves, the instrument describes it as the respondents' answers "as of their last completed interview". For example, "continuing adult respondents who have ever smoked a cigarette as of their last completed interview".

(13) **/ Notation.** The **/** notation on some item IDs is indicative of a Wave 6 instrument error. The "***" represents an instrument SKIP ERROR which resulted in missing data for some respondents. See Appendix - Adult Instrument Skip Error Summary for more information. The "****" notation on some item IDs is indicative of a Wave 6 instrument DATA ERROR which are not attributed to any skip errors. Data errors are not systematic and occur for a variety of reasons at the individual respondent level (interview breakoffs, respondents moving back and forth in the questionnaire creating discrepant data, laptop failures, transmission errors, etc.). See Appendix - Adult Instrument Data Error Summary for more information.

(14) Nicotine Dependence Section. Respondents routed to this section were asked the questions up to two times. There is a sub-section for electronic nicotine products and a sub-section for all other products. For this reason, the nicotine dependence data are stored in two sets of variables: one that ends with an "E" suffix (for example, R06_AN0030E, R06_AN0035E, R06_AN0045E) and one that does not (for example, R06_AN0030, R06_AN0035, R06_AN0045). This note describes the variables in which the data are stored and how use is defined.

Polyuse means use of two or more tobacco products. The variables with the "E" suffix only include data about electronic nicotine products. Data for all other tobacco products are found in the variables without the suffix. Analysts interested in dependence among electronic nicotine product users only need to consider the variables with the "E" suffix.

PATH Study Wave 6 Adult Public Use File (PUF) Annotated Instrument

Variables that store nicotine dependence data

- Data for single product users who use electronic nicotine products are stored in the variables with the "E" suffix.
- Data for single product users or polyusers who do not use electronic nicotine products are stored in the variables without the "E" suffix.
- Data for polyusers who use electronic nicotine products are stored in both sets of variables: those with the "E" suffix (for electronic nicotine product data) and those without the "E" suffix (for other product data).

Description of respondents who are asked questions in the nicotine dependence section.

Respondents were routed to the nicotine dependence section based on the count of tobacco products used, which is itself dependent on how use is defined.

The count of tobacco products used to determine if a respondent was a single product user or a polyuser depended on two types of use: current use (CU) and new former use (NF). The count of tobacco products used does not distinguish between established use and experimental use, which is a change compared to Wave 5. In Wave 5, a respondent who was an established user of a single product and experimental user of one or more other products would be counted as a single product user for nicotine dependence. In Wave 6, they would be counted as a polyuser. In both Waves 5 and 6, some questions are limited to respondents who are established users or polyusers. In Wave 5, established and experimental use were elements of the count of tobacco products, whereas in Wave 6, established vs. experimental use is determined separately.

The rules for counting products used are shown in the table below.

- To determine the count, the products in the use category(ies) shown in the "basis of product count" column were summed. Each of the three types of cigars (traditional cigars, cigarillos and filtered cigars) were counted separately, as were smokeless tobacco and snus.
- Based on that sum, users were categorized as single product users or polyusers.
- If one of the use categories was missing, it was considered to be no.
- The questions asked in the nicotine dependence section were about the products in the use category(ies) shown in the last column.

Current user (CU)	New former user (NF)	Basis of product count
YES	NO	CU
NO	YES	NF
YES	YES	CU and NF combined
NO	NO	Not applicable

Once the respondent was categorized as a single product user or a polyuser, their responses to questions were stored in the data file as described in the variables section above.

(15) Telephone Show Cards. In order to administer the Wave 6 Adult Instrument interviews via telephone, show cards were developed so respondents could view generic images and response options for select questions. Respondents were directed to the PATH Study participant website before the interview to access the show cards electronically. If respondents could not access the show cards electronically, a hardcopy paper version was mailed. Interviewers directed respondents to view the relevant show card using alphanumeric IDs (e.g. "Please look at show card C-6.") All telephone show cards used during telephone interview administration are included in an appendix.

Using these devices is often referred to as "vaping." They are battery-powered and produce vapor or aerosol instead of smoke. They typically use a nicotine liquid called "e-liquid," although the amount of nicotine can vary and some may not contain any nicotine at all.

Some common brands include JUUL, Vuse, Blu, NJOY, eGo, Suorin, Bo, Smok, Phix, and Puff, but there are many others.

[[A-34.]]The next questions are about **smokeless tobacco**other than snus.

Smokeless tobacco is a type of tobacco which you put in your mouth and chew, suck, or spit. It may be loose or packaged in small pouches that you can place directly in your mouth. There are many kinds of smokeless tobacco, such as dip, spit, moist snuff, pouches, and chewing tobacco. Common brands include Skoal, Copenhagen, Grizzly, Redman, and Levi Garrett.

Please do **not** include snus when answering the following questions.

[[A-35.]]The next question asks about another type of tobacco called dissolvable tobacco. You don't smoke dissolvable tobacco products - they are made of finely ground flavored tobacco that dissolves in your mouth. Dissolvable tobacco products come in a variety of shapes, including small round pellets, thin sticks, and flat strips. Some common brands are Ariva, Stonewall, and Camel Orbs, Sticks, or Strips. [[C-1.]] The next questions are about **electronic nicotine products**.

Some electronic nicotine products can be bought as one-time, disposable products, while others can be bought as re-usable kits with a pod, cartridge, or tank system. Some people refill their own electronic nicotine products with nicotine fluid, sometimes called "e-liquid" or "e-juice".

Disposable products, pods, cartridges, and e-liquid come in many different flavors and nicotine concentrations. Some common brands include JUUL, Vuse, Blu, NJOY, eGo, Suorin, Bo, Smok, Pnix, and Puff, but there are many others.

Please do not include marijuana or cannabis when answering the following questions about electronic nicotine products. There will be a separate section later about using marijuana or cannabis.

PROGRAM - DISPLAY THE FOLLOWING TRANSITION TEXT AT THE START OF LOOPS:

IF LOOP=BTRAD (Traditional Cigars as blunts-only):

[[D-1.]]The next questions are about traditional cigars when smoked as blunts.

Traditional cigars contain tightly rolled tobacco that is wrapped in a tobacco leaf. Sometimes people take tobacco out of a traditional cigar and replace it with marijuana. This is sometimes called a blunt. As you answer these questions, please think only about your use of traditional cigars when smoked as blunts like those shown. [ONLY IF THIS IS NOT THE LAST TIME THROUGH THE BLUNT SECTION:] There will be a separate section later about other kinds of blunts.

[SHOW GENERIC IMAGE OF TRADITIONAL CIGARS]

IF LOOP=BRILLO (Cigarillos as blunts-only):

[[D-2.]]The next questions are about cigarillos when smoked as blunts.

Cigarillos are medium-sized cigars and sometimes come with plastic or wood tips. [Sometimes people take tobacco out of a cigarillo and replace it with marijuana. This is sometimes called a blunt.] As you answer these questions, please think only about your use of cigarillos when smoked as blunts like those shown. [ONLY IF THIS IS NOT THE LAST TIME THROUGH THE BLUNT SECTION:] There will be a separate section later about other kinds of blunts.

[SHOW GENERIC IMAGE OF CIGARILLOS]

IF LOOP=BFILTR (Filtered Cigars as blunts-only):

[[D-3.]]The next questions are about filtered cigars when smoked as blunts.

Filtered cigars are usually brown and have a filter like a cigarette. [Sometimes people take tobacco out of a filtered cigar and replace it with marijuana. This is sometimes called a blunt.] As you answer these questions, please think only about your use of filtered cigars when smoked as blunts like those shown.

BOX ID: R06_ANR02

Adult respondents who are current or recent former users of tobacco go through the Nicotine Dependence ENP and tobacco modules according to the following conditions:

Condition a: Respondents who are current and/or recent former users of only one product. Condition a will be asked the questions in either the ENP module or the tobacco module (not both), with fills tailored to their specific product.

Condition b: Respondents who are current and/or recent former users of more than one product, where one of those products is/was an ENP. Condition b will respond to the questions in both modules; the ENP module will be tailored to their ENP and the tobacco module will be tailored to their other specific product.

Condition c: Respondents who are current and/or recent former users of two or more products, where none of those products is an ENP. Condition c will respond to the questions in the tobacco module only, with fills tailored to their tobacco use overall.

Condition d: Respondents who are current and/or recent former users of three or more products, where one of those products is/was an ENP. Condition d will respond to the questions in both modules; the ENP module will be tailored to their ENP and the tobacco module will be tailored to their tobacco use overall.

Else, go to Box R06_ART01.

APPENDIX – ADULT INSTRUMENT DATA ERROR SUMMARY

This table summarizes variables with data errors that are not attributed to any skip errors in the data collection instruments. For some respondents, these variables have missing data. Data errors are not systematic and occur for a variety of reasons at the individual respondent level (other - specify text response coding, interview breakoffs, respondents moving back and forth in the questionnaire creating discrepant data, laptop failures, transmission errors, etc.).
