PATH Study Wave 7 Annotated Instrument - Explanatory Notes

BOX ID: R07_PMD07

(1) Structure of Question Boxes. Each question in the annotated instrument is presented in a box. Within the box, the top row usually indicates the name of the variable(s) in which data collected by that question are stored. However, for questions with a "choose all that apply" structure, the top row states "SEE BELOW:" and the variable names are displayed next to the corresponding response options. All variable names are displayed in bolded red font. The second row includes the question text, including any instructions for the respondent (for example, "Choose all that apply"). The next several rows display the response options. The last rows specify which respondents were asked the question, followed in many instances by special instructions used in programming. The rows that specify which respondents were asked the question are split into two parts: The first part (the "ASK Description") provides a general description of which respondents were asked; the second part (the "ASK Specification") identifies which respondents were asked as a logic statement using specific variables.

(2) Non-Question Boxes. Some boxes in the instrument do not include questions. These boxes include introductory text, display instructions, or more complex programming instructions, such as those used to create derived variables.

(3) Question Routing. The instrument was designed with the assumption that all respondents to a question would be asked the next question, unless there are specific instructions routing a subgroup of respondents to a different question. The phrase "GO TO" precedes such routing instructions. Complex routing instructions are split into two parts: The first part (the "GO TO Description") provides a general description of the routing instructions; the second part (the "GO TO Specification") reiterates the instructions as a set of logic statements, using specific variables. Non-response values ("DON'T KNOW" and "REFUSED") are treated the same as response values for routing; if they are not mentioned in specific routing instructions, then the routing follows other criteria. Many routing instructions consist of multiple statements. The first statement describes a set of conditions and indicates the next question to be asked if those conditions are met. ("IF ____, GO TO ____.") Subsequent statements use the word "else" to indicate that the conditions given in previous statements have not been met. ("ELSE, IF ____, GO TO ____.") This means that the first statement fulfilled by the respondent always indicates the next question asked.

(4) Randomized Question Order. Some series of questions were presented to respondents in a randomized order. In such instances, a non-question box precedes the series and specifies which questions are part of the randomized series. Routing within these series indicates which questions were asked of different respondents and reflects the static order of the questions in this document. It does not reflect the actual order in which the questions were displayed for respondents.

(5) Iterative Loops. There are several questions, series of questions, and entire sections that are specified as being asked in a loop. In such instances, questions were iteratively asked of the respondent to collect similar information on two or more topics. For example, the questions about cigars are asked iteratively regarding traditional cigars, cigarillos, and filtered cigars. These items are specified a single time, with programming instructions identifying the beginning and ending of the loop, how it is to be changed for each iteration, and the order in which each iteration should be presented. Looped items utilize iteration indicators to provide precise ASK Specifications and GO TO Specifications for each iteration of the item. The responses for each iteration are captured in different variables, which have different suffixes to indicate which iteration each variable applies to. For example, the variables for traditional cigars end in TC, the variables for cigarillos end in CL, and the variables for filtered cigars end in FC. (Please refer to the PATH Study User Guide for detailed information on variable nomenclature.) ASK Specifications and GO TO Specifications address each iteration separately, with the particular variable identified at the start of the specification. (For example, "FOR R07_YG1005TC:" precedes the ASK specification that applies to the traditional cigar iteration of R07_YG1005; "FOR LOOP = GTRAD" precedes the GO TO Specifications that apply to the traditional cigar iteration of routing instructions.) However, the ASK Descriptions and GO TO Descriptions do not address the iterations separately.

Instead, the overall description is given a single time and the iterated products are combined by slashes. (For example, "respondents who have ever smoked traditional cigars/cigarillos/filtered cigars" indicates that one iteration of the question applies to respondents who have ever smoked traditional cigars, another applies to those who have ever smoked cigarillos, and another to those who have ever smoked filtered cigars.) When GO TO Descriptions and response-level GO TO statements indicate routing to a variable within a loop, the root variable is referenced a single time and the iteration indicator suffixes are combined in brackets. (For example, "go to R07_YG1005[TC/CL/FC].") This is done to simplify the presentation. Unless explicitly stated otherwise, variables for one iteration have no impact on a different iteration. For example, if a question about cigars refers to a variable that ends in [TC/CL/FC], only the TC variable applies to the traditional cigar iteration, only the CL variable applies to the cigarillo iteration, and only the FC variable applies to the filtered cigar iteration.

(6) Variables For Multiple Components. Some questions contain separate variables for multiple components. Examples of such items include "choose all that apply" questions, where there is a separate variable for each response category; questions that ask about duration, where data are recorded in separate variables as number and unit (days, months, years) combinations (number variables are indicated by the suffix `_NN` and unit variables are indicated by `_UN`); and questions that ask for a price, where data are recorded in separate variables as dollar (`_D`) and cent (`_C`) combinations. (Variables with the suffix `_D`, `_C` or `_NN` are open-field variables that allow respondents to enter any numeric value. As such, no discrete values are indicated for these variables. However, variables with the suffix `_UN` have values corresponding to set options from which the respondent must choose. Because `_NN/_UN` questions combine these two variable types, item-level notes are utilized to clarify that the discrete values presented in the instrument refer only to the `_UN` variable.) Each component variable in such items is differentiated using an appropriate suffix. (Please refer to the PATH Study User Guide for detailed information on variable nomenclature.) However, when variables with multiple components are referenced in routing instructions that precede the question, the component suffix is omitted. This is done to simplify the presentation, since before the question is asked, the respondent's answer is not known. Unless explicitly stated otherwise, the reference to the root variable name (without the component suffix) in the logic means that the logic applies to the entire item, not just to a specific component variable. In routing instructions that come after the question, the specific variable with the component suffix is included, so that the routing instructions are clear and specific.

(7) Logic Checks. Some questions include a soft range check for responses. This means that respondents were not prevented from entering responses that were outside of the range. However, if a respondent entered a response that was out of range, they received a prompt noting their answer. They were asked to change their answer if it was incorrect or confirm their answer by proceeding to the next question. These logic checks are presented in the annotated instrument as probe questions, immediately following the question they check. Respondents are routed to the logic check and a program note specifies the conditions that trigger the prompt to be shown. If the respondent did not meet the trigger conditions, they proceeded to the next question without being shown the prompt. Logic checks are identified by the suffix `_LC1` (or `_LC2`, etc.) added to the root variable name of the question they check. Although similar to actual questions, logic checks do not capture data. Logic checks are presented with ASK specifications, but without ASK descriptions to help distinguish them from actual questions.

(8) Never Users. The instrument refers to a respondent not reporting use of a product as having never used the product. As such, never usage includes respondents reporting that they have never used a product, or that they don't know whether they have ever used the product, or refusing to answer whether they have ever used the product. This design reflects programming and data collection necessities, rather than an analytic definition.

(9) Images. All generic images used to display examples during interview administration are included in an appendix. Images used to display tobacco brands, products, or advertisements are not included in this instrument.

(10) Conditional Display Text. Many questions include text that varies in what is displayed under

different conditions. The conditional text is always enclosed by brackets in the question. In certain cases, a text fill is described for a set of words that will be used repeatedly prior to their use. For example, [EPRODFILL2] is used for several questions in the Electronic Nicotine Products (ENP)s section and a box beforehand describes the conditions in which that text is filled as "electronic nicotine products", "pods or cartridges", or "e-liquid". However, the majority of conditional text is detailed within the question box - all the text options are shown in brackets and the different conditions are explained in display instructions. For example, "Do you know the name of the brand of cigarettes you [usually smoke/last smoked]?" has instructions to display "usually smoke" for smokers who have a regular brand, but to otherwise display "last smoked". In some questions, a portion of text is shown in certain conditions, with nothing displayed in other conditions. For example, "On average, how long is one hookah session for you[and the people you share it with]?" displays " and the people you share it with" for smokers who usually share a hookah, but not if they usually do not share. The brackets include the space between "you" and "and", because there should not be a space between "you" and the question mark when the conditional text is not displayed.

(11) New Product Placeholder section. In the Wave 7 Youth data collection instrument, a placeholder section was included in the questionnaire to allow the possibility of adding new tobacco products to the survey during the data collection period. No product warranted activation of the section during data collection, so there are no data or variables associated with the section. Given that, the "New Product - Placeholder" section has been excluded from the Wave 7 Youth annotated instrument.

(12) References to Preload Data. As continuing respondent cases are prepared for data collection, data from prior waves are preloaded into the instruments for the current wave for longitudinal reference. For example, in the Wave 7 Youth instrument, identification of youth who have ever smoked a cigarette is based on the tobacco users groups and item responses from Waves 1 - 6 as well as responses to the Wave 7 instrument. Variables for this preloaded data are indicated by the prefix "R06_", signifying the most recent data at the close of Wave 6, the last primary wave. When referencing data from previous waves, the instrument describes it as the respondents' answers "as of their last completed interview". For example, "continuing youth respondents who have ever smoked a cigarette as of their last completed interview".

(13) **/ Notation.** The **/** notation on some item IDs is indicative of a Wave 7 instrument error. The "***" represents an instrument SKIP ERROR which resulted in missing data for some respondents. See Appendix - Youth Instrument Skip Error Summary for more information. The "****" notation on some item IDs is indicative of a Wave 7 instrument DATA ERROR which are not attributed to any skip errors. Data errors are not systematic and occur for a variety of reasons at the individual respondent level (interview breakoffs, respondents moving back and forth in the questionnaire creating discrepant data, laptop failures, transmission errors, etc.). See Appendix - Youth Instrument Data Error Summary for more information.

(14) Telephone Show Cards. In order to administer the Wave 7 Parent and Youth interviews via telephone, show cards were developed so respondents could view generic images and response options for select questions. Respondents were directed to the PATH Study participant website before the interview to access the show cards electronically. If respondents could not access the show cards electronically, a hardcopy paper version was mailed. Interviewers directed respondents to view the relevant show card using alphanumeric IDs (e.g. "Please look at show card C-6.") All telephone show cards used during telephone interview administration are included in separate documents (please refer to the PATH Wave 7 Telephone Show Card Booklets).

[[B-1.]]The next questions are about **electronic nicotine products**, such as e-cigarettes, pod devices, vape pens, tank systems, mods, e-cigars, e-pipes, e-hookahs, and hookah pens.

Using these devices is often referred to as "vaping." They are battery-powered and produce vapor or aerosol instead of smoke. They typically use a nicotine liquid called "e-liquid," although the amount of nicotine can vary and some may not contain any nicotine at all.

Some common brands include JUUL, Vuse, Blu, NJOY, eGo, Suorin, Bo, Smok, Phix, and Puff, but there are many others.

PROGRAM - DISPLAY THE FOLLOWING TRANSITION TEXT AT THE START OF LOOPS:

IF LOOP=BTRAD Traditional Cigars (as blunts-only):[[C-13.]]The next questions are about traditional cigars when smoked as blunts.

Traditional cigars contain tightly rolled tobacco that is wrapped in a tobacco leaf. Sometimes people take tobacco out of a traditional cigar and replace it with marijuana. This is sometimes called a blunt. As you answer these questions, please think only about your use of traditional cigars when smoked as blunts like those shown. [ONLY IF THIS IS NOT THE LAST TIME THROUGH THE SECTION:] There will be a separate section later about other kinds of blunts.

SMOKELESS TOBACCO

BOX ID: R07_YST01

[[G-1.]]The next questions are about **smokeless tobacco** other than snus, nicotine pouches, or other types of oral nicotine products.

Smokeless tobacco is a type of tobacco which you put in your mouth and chew, suck, or spit. It may be loose or packaged in small pouches that you can place directly in your mouth. There are many kinds of smokeless tobacco, such as dip, spit, moist snuff, pouches, and chewing tobacco. Common brands include Skoal, Copenhagen, Grizzly, Redman, and Levi Garrett.

Please do **not** include snus or nicotine pouches when answering the following questions. There will be a separate section later about nicotine pouches (such as Zyn, on!, and Velo), and other types of oral nicotine products.

Tobacco use and non-use is related to many types of social and individual characteristics. Other characteristics we ask about include race, physical activity, and health.

The following questions about you, your education, employment, and sexual orientation are being asked for the same reason - to learn how tobacco use may be related to these characteristics. Remember all information you give to the PATH Study will be kept private.

APPENDIX – YOUTH INSTRUMENT SKIP ERROR SUMMARY

This table summarizes skip errors in the data collection instruments that resulted in missing data on these items for some respondents. Items that were fixed during data collection will have some missing data and some non - missing data.

Item(s)**	Description of Issue	Issue Fixed During Wave 7 Data Collection?	Date Issue was Fixed
R07_YX0520_NB	This item was skipped incorrectly by some respondents who were new cohort youth (R07_YOUTHTYPE = 3).	Yes	2/03/2022

APPENDIX – YOUTH INSTRUMENT DATA ERROR SUMMARY

This table summarizes variables with data errors that are not attributed to any skip errors in the data collection instruments. For some respondents, these variables have missing data. Data errors are not systematic and occur for a variety of reasons at the individual respondent level (other - specify text response coding, interview breakoffs, respondents moving back and forth in the questionnaire creating discrepant data, laptop failures, transmission errors, etc.).
